

# REACT Processos

No Visual Studio Code clique com o botão direito na pasta em que irá ser criado o projeto em react e abrir com o terminal Integrado.

- `npm install -g create-react-app` (Instalar pacote react)
- `npx create-react-app todo-list-app` (criar todo-list-app)

Após a conclusão ele terá criado a estrutura padrão do react.

`cd todo-list-app` (Entrar na pasta todo-list-app)

`npm start` (Inicia o servidor de desenvolvimento)

`ctrl + c` (Para o servidor de desenvolvimento)

`npm run build` (Bundles the app into static files for production.)

`npm test` (Starts the test runner)

`npm run eject` (Removes this tool and copies build dependencies, configuration files and scripts into the app directory. If you do this, you can't go back!)
